Features:

Rotate it to adjust volume
Press it down to be muted

The USB interface

Easy to be muted:

- Pressing down the top cover will turn to be mute; pressing again it will return to the original volume.

Volume Control:

- The entire top of the Wire Controller is one big, physical volume control knob, you can control volume of your computer speaker.
- 1. First plug this USB wire controller to your computer;

  2. Then adjust the volume level you actually want using this big knob, which is way easier than hunting for the setting on your computer.
- Use stepper digital potentiometer, pointing adjustment, has a very nice feel.
- It controls computer sound card by instruction, sound doesn't get through wire, so no loss of sound quality.

Note:

- Please don't use this item in damp environment, although the product has been packaged with waterproof material, the components may also be broken in damp environment for a long time.
- Please put this item in a safe and stable space, to avoid failing or being broken.
- The volume control knob has a very nice smooth feel, please don't force to turn it.
